

Markdown and DataCamp Workspace Guide

To submit your case study report, you will need to write up your analysis using DataCamp Workspace. You will include text using Markdown, a lightweight markup language common in the data community.

Note: As a Data Analyst, you do not need to code in your Workspace, you can use any tools you want. You only need to use Workspace to write up your summary. This guide will not cover coding in Workspace.

Adding and Editing Cells

When you start your case study, you will be given a template to work from. There will already be some cells (text boxes) with the tasks you need to complete. You can complete your case study by editing those cells to add your answers.

To edit a cell or see the information in it, you will need to click on the cell you want to edit and then click the “Edit” button on the right-hand side (see the image below).

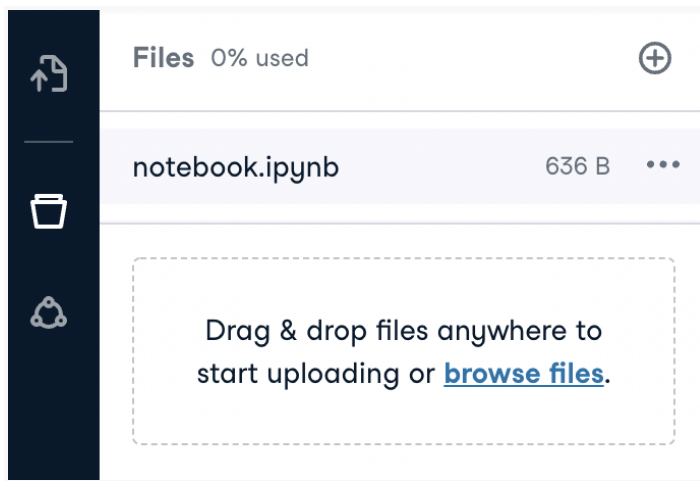

Once the cell is active, you can write. Although you don't need to use any special formatting, there are some things you may feel you want to use. Others, like images, that you will need to use.

Including Images

You will need to include a number of visualizations in your case study. To do that you will need to first upload them.

In the right-hand side navigation bar, you will find an option to “Browse and Upload Files”, which when clicked will give you the option to browse for files to upload as well as showing you the list of all files you have already uploaded (see screenshot below). You will need to upload your files as png or jpeg files.

Once you have uploaded the file, you will then need to include the right markdown code to include it in your report. The code below shows the code you will need.

```
![Alternative text in case your image doesn't appear](filename.jpg)
```

First you have the exclamation mark (!). This is followed by square brackets that contain alternative text, what should be displayed if your image doesn't show. These square brackets can be left empty, but must be included. Finally, you will need round brackets that include the filename including the extension (.png, .jpeg).

Let's suppose we have uploaded a file called "bar_chart.png". We want the alternative text to say "Breakdown by category". The code would look like this:

```
![Breakdown by category](bar_chart.png)
```

Tip: Don't use spaces in your file names. Space will mean your image does not show up.

Common Text Formatting

The table below shows some common formatting options that you may want to use in your report. Remember that for certification, the content is more important than the formatting, focus on saying what you want to say before how it looks!

Formating	Syntax
Headings	# Heading 1 ## Heading 2 ### Heading 3
Bold	**This will be in bold**
Italic	<i>* This will be in italics *</i>
Unordered list	- Item 1 - Item 2 - Item 3
Table	Column 1 header Column 2 Header Column 2 Header --- --- --- row 1, column 1 row 1, column 2 row 1, column 3 row 2, column 1 row 2, column 2 row 2, column 3

For more formatting options, take a look at this [Markdown Cheatsheet](#).
